## Summary

Full Stack Developer with 3.5 years of experience building systems that are live in production: management platforms, customer portals, chatbots and system integrations. I work with React, Next.js and TypeScript on the frontend and Node.js (NestJS) and Python (FastAPI) on the backend, with a focus on getting business rules right, automated testing and data integrity. Currently completing a university degree in Mathematics Education (graduating December 2026); teaching has sharpened how I communicate and document technical decisions.

## Technical Skills

**Frontend:** React (React.js), Next.js, TypeScript, JavaScript (ES6+), Redux Toolkit, TanStack Query, React Hook Form, Zod, Tailwind CSS, Material UI (MUI), HTML5, CSS3, accessibility (WCAG)

**Backend:** Node.js, NestJS, Express, Python, FastAPI, REST APIs, microservices, OpenAPI (Swagger)

**Databases:** PostgreSQL, SQL Server, SQLite, TypeORM, SQLAlchemy, Alembic, Firebase

**Integrations:** Telegram Bot API, WhatsApp Cloud API, Moodle Web Services, Keycloak (OIDC, SSO), webhooks

**Mobile and desktop:** React Native, Expo, Electron

**Testing:** unit, integration and E2E testing, Vitest, Jest, pytest, Testing Library, Playwright

**DevOps and tools:** Git, CI/CD with GitHub Actions, Docker, Azure (Functions, Pipelines), Vercel

**Practices:** Agile (Scrum), code review, technical documentation (ADRs)

## Professional Experience

**Full Stack Developer**

*Mecantronic | Remote | 04/2025 - Present*

- **Durrieu Consignatarios**: livestock trading platform (in production, pilot stage). Designed and built Durry, a Telegram and WhatsApp bot in Python and FastAPI that lets agents and clients log deals, offers and requests by chatting, and shipped features across the FastAPI/PostgreSQL backend and the Next.js 16 / React 19 web app.
- **Plan Mi Casa**: home savings plan; the client's core system (in production). Built most of the subscriber portal (account statement, installment prepayment via QR payment, interest breakdown, receipts and notifications) and back-office modules (audit log, overdue accounts, dashboard, notifications and Excel/PDF export) with React, TypeScript, MUI and Redux Toolkit.
- **ESConecta**: corporate training platform (in production). Designed and built the Moodle campus integration in NestJS on Azure Functions (automatic, idempotent user provisioning, enrollment and suspension, with failure reconciliation) and worked on single sign-on (SSO) with Keycloak.
- **Tu Casa en Cuotas**: SaaS template derived from Plan Mi Casa (proof of concept). Built the plans, subscriptions, accounts and notifications modules in a pnpm monorepo with two React 19 apps and a shared package with per-client branding and terminology.
- **Discera**: Telegram assistant for a class-scheduling platform (proof of concept). Built the bot's core in NestJS: role-based menus, account linking through single-use links and flows to check and reschedule classes.

**Frontend Developer (web and mobile)**

*NovoGas (Global Energy Innovations S.A.C.) | Remote | 08/2023 - 04/2025*

- **Web admin dashboard**: for companies managing smart valves on bottled-gas cylinders. Users, devices, a location map with Google Maps and statistics charts with Chart.js, built with React, Redux Toolkit, Tailwind CSS and Material UI.
- **Mobile app**: for end users, since 07/2024. Built with React Native and Expo: remote valve on/off, balance top-ups, real-time consumption via Socket.io, multi-device management and device registration by QR scan.

**Freelance Developer**
*Self-employed | 05/2023 - Present*

- **Mecánica Dealbera**: desktop app to run a car repair shop (in development). Customers, vehicles, jobs, service reminders and PDF quotes, built with Electron, React 19, TypeScript and SQLite; it works offline and updates itself.
- **Grupo Oeste Seguros**: landing page for an insurance agency, live as its advertising site (2024). Insurer carousel, a service picker that pre-fills the inquiry and a contact form with file attachments, built with React, JavaScript and Tailwind CSS; the backend was handled by another developer.

**Teaching Assistant**
*SoyHenry | 03/2023 - 05/2023*

- Guided a cohort of bootcamp students through onboarding, supported problem-solving through pair programming and proposed improvements to the course.

## Projects

- **El Templo de las Asíntotas**: real-time web escape room for teaching rational functions; personal project, 2026 (proof of concept). Student teams compete while the teacher runs the game from a live dashboard. React 19, strict TypeScript, Tailwind CSS 4 and Firebase Realtime Database, with clean architecture enforced by tests (~1,600 cases) and security rules tested against the emulator.

## Education

**University Degree in Mathematics Education (Profesorado Universitario en Matemáticas)**
*Universidad Nacional de Villa María | 2015 - 12/2026 (expected)*

**Full Stack Web Developer Bootcamp (800 hours)**
*SoyHenry | 01/2023 - 05/2023*

## Languages

- Spanish: native
- English: A2 (technical reading; limited conversation)
